🧠 JavaScript Beginner Practice:

✴️ Arithmetic Operator Tasks

1. Ask the user to enter two numbers. Show the result of **adding** them using `alert()`.
2. Ask for two numbers. Subtract the second number from the first and log the result to the console.
3. Ask for two numbers. Multiply them and display the answer in an alert.
4. Ask the user for two numbers. Divide the first by the second and log the result.
5. Ask the user for two numbers and show the **remainder** when the first is divided by the second (use `%`).

✴️ Assignment Operator Tasks

6. Create a variable with the value 10. Add 5 to it using `+=` and log the new value.
7. Create a variable with the value 20. Subtract 4 from it using `-=` and alert the result.
8. Create a variable with the value 6. Multiply it by 3 using `*=` and display the result.
9. Set a variable to 50. Divide it by 2 using `/=` and log the final value.
10. Create a variable, assign it a value from `prompt()`, then increase it by 10 and show the result.

✴️ Comparison Operator Tasks

11. Ask the user for two numbers. Use `>` to check if the first number is greater than the second, then log the result (true/false).

12. Ask the user for two numbers. Use `<` to check if the first number is less than the second, then alert the result.

13. Ask the user for a number. Use `==` to check if it equals 100 and log the result.

14. Ask the user for a number. Use `===` to check if it is exactly equal to the string `"100"` and log the result.

15. Ask the user for two numbers. Use `!=` to check if they are not equal and alert the result.

16. Ask the user for two numbers. Use `!==` to check if they are **not strictly equal** and log the result.

17. Ask for two numbers and check if the first is **greater than or equal to** the second. Display result using alert.

18. Ask for two numbers and check if the first is **less than or equal to** the second. Show result in the console.

✴️ Logical Operator Tasks

19. Ask the user for **age** and **country**. Use `&&` to check if age is over 18 **and** country is `"USA"`. Log the result.

20. Ask the user to enter a **color** and a **shape**. Use `||` to check if the color is `"red"` **or** the shape is `"circle"`. Show the result in an alert.
